

**XXVIII INTERNATIONAL SYMPOSIUM ON  
MODERN TECHNOLOGIES, EDUCATION AND PROFESSIONAL PRACTICE  
IN GEODESY AND RELATED FIELDS**

**Sofia, 08 - 09 November 2018**

---

**INFORMATION AND EDUCATION**

**Nelly Zdravcheva (BG)**

**Summary**

In the report, the author, professionally qualified in the field of technical training and geodesy, photogrammetry and cartography engineer, based on his long teaching experience in photogrammetry and distance methods, analyzes different aspects of the information.

Special attention is paid to the inseparable connection between education and information. This problem is very important because at present the correct understanding of the essence of the information, its receipt, storage, processing and spreading refers not only to geodesy, photogrammetry, distance methods, cartography and geographic information systems, but almost all areas of modern life. The report proposes and discusses a number of pedagogical ideas related to the subject under consideration in order to further improve the quality and efficiency of the modern educational system.

**Key words:** information, photogrammetric and distance methods, geographic information systems (GIS), education, pedagogy

**AUTHOR:**

Assoc. Prof. Dr. Nelly Zdravcheva
