IN GEODESY AND RELATED FIELDS**

Sofia, 08 - 09 November 2018

**RECRUITMENT OF CADASTRAL INFORMATION -
OPPORTUNITIES AND PROBLEMS**

Ekaterina Kichekova (BG)

ABSTRACT:

Worldwide, there is a need to provide up-to-date information on the real estate situation, their location, their economic and social characteristics, and the legal status of each plot. In both the private and the public sector, land information is fundamental in making decisions that involve investment, development and management at different levels. In this regard, the report examines some current issues in the collection of cadastral information, which objectively impose a change in the approach and technologies used for its acquisition. Attention is drawn to the development of modern, high-quality technologies that help increase accuracy and efficiency and meet the ever-increasing demands of consumers. The report analyzes features associated with the provision of cadastral information on the different types of territories and groups of users.

Keywords: cadastral information, real estate, photogrammetric technologies
